1 Background

The Public Disclosures under this section have been prepared in accordance with the Central Bank of Bahrain ("CBB") requirements outlined in its Public Disclosure Module ("PD Module"), CBB Rule Book, Volume 2 for Islamic Banks. Rules concerning the disclosures under this section are applicable to Liquidity Management Centre B.S.C. (c) (the "Bank") being a locally incorporated bank with a Wholesale Islamic Investment Banking license and its subsidiary The Short Term Sukok Center B.S.C. (c) (the "Company") (together known as the "Group").

The Company is a special purpose company wholly owned by the Bank. The Company has appointed the Bank to act as an agent on behalf of the STS Program, issue short term sukuks and manage the STS Program.

The Board of Directors seeks to optimize the Bank's performance by enabling the various group business units to realize the Group's business strategy and meet set business performance targets by operating within the agreed capital and risk parameters within the Group risk policy framework.

2 Capital adequacy

The primary objectives of the Group's capital management are to ensure that the Group complies with externally imposed capital requirements and that it maintains healthy capital ratios in order to support its business and to maximize shareholders' value.

The Group manages its capital structure and makes adjustments to it in light of changes in economic conditions and the risk characteristics of its activities. In order to maintain or adjust the capital structure, the Group may adjust the amount of dividend payment to shareholders, return capital to shareholders or issue capital securities.

The Bank's capital adequacy policy is to maintain a strong capital base to support the development and growth of the business. Current and future capital requirements are determined on the basis of growth expectations of the business and future sources of and uses of funds. To assess its capital adequacy requirements in accordance with CBB regulations, the Group adopts the Standardized Approach for its Credit Risk, Basic Indicator Approach for its Operational Risk and Standardized Measurement Approach for its Market Risk.

There are no restrictions on the transfer of funds or regulatory capital within the Group and all investments are fully complying with the CBB approval and related instructions.

There are no differences in the basis of consolidation for accounting and regulatory purposes for the subsidiary within the Group.

Table – 1. Capital Structure (PD-1.3.12, 1.3.13, 1.3.15)

The following table summarizes the eligible capital after deductions for Capital Adequacy Ratio (CAR) calculation:

	<i>CET 1</i> US\$ '000	<i>AT1</i> US\$ '000	<i>T 2</i> US\$ '000
<i>Components of capital</i>			
Issued and fully paid ordinary shares	59,039	-	-
General reserves	2,226	-	-
Legal / statutory reserves	3,669	-	-
Retained earnings	(15,370)	-	-
Current interim profits	1,225	-	-
Unrealized gains arising from fair valuing equities	2,460	-	-
<i>Total CET 1 Capital prior to regulatory adjustments</i>	<i>53,249</i>	<i>-</i>	<i>-</i>
<i>Other Capital</i>			
General financing loss provisions	-	-	2,068
<i>Net Available Capital after applying haircut</i>	<i>53,249</i>	<i>-</i>	<i>2,068</i>
<i>Total Tier 1</i>	<i>-</i>	<i>53,249</i>	<i>-</i>
Total Capital			55,317

2 Capital Adequacy (continued)

Table – 2. Capital requirements by type of Islamic financing contracts (PD-1.3.17)

The following table summarises the amount of exposures subject to standardized approach of credit risk and related capital requirements by type of Islamic financing contracts:

	<i>Risk weighted assets US\$ '000</i>	<i>Capital requirements @ 12.5% US\$ '000</i>
Due from banks	1,700	213
Mudaraba receivables	19,846	2,481
Financing receivables	6,762	845
Investment in sukuk	68,966	8,621
	97,274	12,159

Table – 3. Capital requirements for Market Risk (PD-1.3.18)

The following table summarises the amount of exposures subject to standardized approach of market risk and related capital requirements:

	<i>Self financed US\$ '000</i>
Market Risk - Standardised Approach - Foreign exchange risk	110
Multiplier	12.5
Eligible Portion for the purpose of the calculation	100%
RWE to be used in CAR Calculation	1,375

The minimum capital requirement for the above market risk exposure at 12.5% is US\$ 172 thousand.

Table – 4. Capital Requirements for Operational Risk (PD-1.3.19) and (PD-1.3.30 (a & b))

The following table summarises the amount of exposures subject to basic indicator approach of operational risk and related capital requirements:

<i>Indicators of operational risk</i>	<i>Capital charge US\$ '000</i>
Average gross income	8,666
Multiplier	12.5
	108,325
Eligible Portion for the purpose of the calculation	15%
	16,249

The minimum capital requirement for the above operational risk exposure at 12.5% is US\$ 2,031 thousand.

2 Capital Adequacy (continued)

Table – 5. Capital Adequacy Ratios (PD-1.3.20)

The following table summarises the CAR as of 30 June 2017 for total capital and Tier 1 capital at the top consolidated level in the Group:

	<i>Total capital ratio</i>	<i>Tier 1 capital ratio</i>
Top consolidated level	30.22%	29.09%

The CBB's minimum capital adequacy ratios for banks incorporated in Bahrain at a consolidated level are as follows:

	<i>Minimum Ratio Required</i>	<i>Capital Conservation Buffer (CCB)</i>	<i>CARS including CCB</i>
CET1	6.5%	2.5%	9.0%
Tier 1	8.0%	2.5%	10.5%
Total Capital	10.0%	2.5%	12.5%

3 Risk Management

3.1 Risk Management Objectives

Risk management is an integral part of the Group's decision-making process. The ALCO and Risk Management and Compliance Committees guide and assist with overall management of the Group's balance sheet risks. The Group manages exposures by setting limits/strategies approved by the Board of Directors.

The risk management philosophy of the Bank is to identify, capture, monitor and manage the various dimensions of risk with the objective of protecting asset values and income streams such that the interest of the Bank's shareholders are safeguarded, while maximizing the returns intended to optimize the Bank's shareholder return while maintaining risk exposure within self-imposed parameters.

In addition to satisfying the minimum regulatory capital requirements of CBB, the Bank seeks to constantly identify and quantify, to the extent possible, the various risks that are inherent in the normal course of its business and maintain appropriate internal capital levels and consequently has developed an Internal Capital Adequacy Assessment Process ("ICAAP") framework. The objective of the Bank's ICAAP is to ensure that adequate capital is retained at all times to support the risks the Bank undertakes in the course of its business.

3.2 Strategies, processes and internal controls

3.2.1 Credit risk

Credit risk is the risk that one party to a financial contract will fail to discharge an obligation and cause the other party to incur a financial loss. The Group controls credit risk by monitoring credit exposures and continually assessing the creditworthiness of counterparties.

3.2.2 Market risk

The Bank proactively measures and monitors the market risk in its portfolio using appropriate measurement techniques. The Bank carries out stress testing to assess the impact of adverse market conditions on its market risk sensitive portfolio.

3.2.3 Operational risk

The Bank has established a self assessment process necessary for identifying and measuring its operational risks. In addition to that, the Bank has conducted a Risk and Control Self Assessment ("RCSA") exercise, which has undertaken the Bank's business lines and their critical activities.

The Bank has established clear segregation of duties, through documentation and implementation of policies and procedures. This ensures objectivity, security and avoids conflicts of interest. Maker checker concept and dual eye principles are applied across the Bank, where applicable.

3 Risk Management (continued)

3.2 Strategies, processes and internal controls (continued)

3.2.4 Equity risk in the banking book

Equity price risk is the risk of decline in the value of a security or portfolio and is the biggest risk faced by all investors. The equity price risk exposure arises from the Group's investment portfolio and can be minimised through diversification. The Group manages and monitors its equity risk using investment limits.

3.2.5 Profit rate risk

Profit rate risk arises from the possibility that changes in profit rates will affect future profitability or the fair values of financial instruments. The Group measures the profit rate risk by carrying out re-pricing gap analysis. This is further supported by limits put in place by the Bank.

3.2.6 Displaced commercial risk ("DCR")

DCR refers to the market pressure to pay returns that exceeds the rate that has been earned on the assets financed by the liabilities, when the return on assets is under performing as compared with the competitor's rates.

The Group does not accept deposits from investors or open profit sharing investment accounts and therefore displaced commercial risk is not currently applicable for the Group.

3.2.7 Review of internal control process and procedures

The Group aims to manage and control the risks it is exposed to by strengthening its internal controls, continuing its efforts to identify, assess, measure and monitor its risks, evolving in its risk management sophistication and promoting a strong control culture within the Group.

Each business unit head is responsible for ensuring that the internal controls relevant to its operations are complied with on a day-to-day basis. The Bank's policies and procedures were applicable throughout the period.

The Audit Committee reviews and evaluates the effectiveness of the Group's procedures and internal control systems for assessing risks or exposures through reviewing policy and procedures of each department. It assists the Board in fulfilling its oversight duties by reviewing the financial information provided to shareholders and others.

The Group has engaged an external professional firm for internal audit of its internal control, procedures and process. Reports issued by the professional firm are reviewed by the Audit Committee.

All the above strategies used have been effective throughout the reporting period.

3.3 Structure and organization of the risk management function

Risk management includes all levels of authorities, organizational structure, people and systems required for the smooth functioning of risk management processes in the Bank. The responsibilities associated with each level of risk management structure and authorities include the following:

- a. The Board retains ultimate responsibility and authority for all risk matters.
- b. Delegating authority to the Risk Management and Compliance Committee, Credit and Investment Committee, the Chief Executive Officer and further delegation to the management to review various transactions prior to approval and execution of those transactions.

3 Risk Management (continued)

3.4 Risk measurement and reporting system

Based on its risk appetite, the Bank has put in place various limits. These limits have been approved by the Board of Directors. Any limit breaches are reported to the respective committees and the Board by the Credit and Risk Management Department ("CRMD"). These limits are reviewed and revised at least, on annual basis or, when is deemed required.

The Bank has developed a risk reporting process that generates various reports to enhance the monitoring process of the Bank.

3.5 Credit Risk

3.5.1 Introduction

Credit risk is the risk of financial loss if a customer or counterparty fails to meet an obligation under a contract. It arises principally from lending and investment activities. The Group controls credit risk by monitoring credit exposures, and continually assessing the creditworthiness of counterparties. Financing contracts are mostly secured by collateral in form of mortgage financing or other tangible securities. Although the Bank has an Ijara Muntaha Bittamleek for the purpose of financing its headquarters, the Bank is not rated by external agencies.

3.5.2 Past due and impaired Islamic financing contracts

The Group defines non-performing facilities as those facilities that are overdue for a period of 90 days or more. These exposures are placed on a non-accrual status with income only being recognized to the extent that it is actually received. It is the Group's policy that when an exposure is overdue for a period of 90 days or more, the whole financing facility extended is considered as past due, not only the overdue instalments / payments.

3.5.3 External Credit Assessment Institutions

The Bank relies on external ratings for rated counterparties and issuances. The Bank uses Standard & Poor's, Fitch, Moody's and Capital Intelligence ratings for such counterparties. These ratings are used for risk assessment and calculation of risk weighted equivalents.

3.5.4 Concentration risk

Concentration risk is the credit risk stemming from not having a well diversified credit portfolio, i.e. being overexposed to a single customer, industry sector or geographic region. As per CBB's single obligor regulations, banks incorporated in Bahrain are required to obtain prior approval from the CBB for any planned exposure to a single counterparty, or group of connected counterparties, exceeding 15% of the regulatory capital base.

In order to avoid excessive concentrations of risk, the Group's policies and procedures include specific guidelines to focus on maintaining a diversified portfolio. Identified concentrations of credit risk are controlled and managed accordingly.

3.5.5 Credit risk mitigation

Credit risk mitigation refers to the use of a number of techniques, like collaterals to mitigate the credit risks that the Bank is exposed to. Credit risk mitigants reduce/transfer the credit risk by allowing the Bank to protect itself and reduce its loss in case of non-performance by counterparty.

Generally, the Bank participates in syndicated credit facilities / extends credit facilities only where supported by adequate tangible collateral security or audited financial statements. Facilities may be considered without adequate tangible collateral security, when audited financial statements reveal satisfactory financial position / repayment ability and the facilities are properly structured and supported by assignments as appropriate.

The majority of the Bank's portfolio is collateralized by real estate properties, where the collateral is for all sukukholders and not specific to the Bank.

3 Risk Management (continued)

3.5 Credit Risk (continued)

3.5.5 Credit risk mitigation (continued)

3.5.5.1 General policy guidelines of collateral management

Acceptable Collateral: The Bank has developed guidelines for acceptable collateral. Assets offered by obligor must meet the following criteria to quantify as acceptable collateral:

- a. Assets must maintain their value, at the level prevalent at inception, until maturity date of the facility granted.
- b. Such assets should be convertible into cash, if necessary.
- c. There should be a reasonable market for the assets.
- d. The Bank should be able to enforce its rights over the asset, if necessary.

Ownership: Prior to valuation or further follow up on the offered collateral, the credit administration department ensures satisfactory evidence of the borrower's ownership of the assets through due diligence.

Valuation: All assets offered as collateral are valued by reputable external appraisers.

- a. **Valuation of shares:** shares are valued based on latest quotes available from respective stock exchanges.
- b. **Valuation of funds:** funds are valued based on NAV received from the fund manager.
- c. **Valuation of real estate:** real estate collateral is valued, on an annual basis, by external real estate valuation experts.

3.5.5.2 Custody / collateral management

The asset, or title to the asset, is maintained in the Bank's custody or with custodian approved by the Bank. The CRMD obtains confirmation of the assets held with each custodian.

3.5.6 Counterparty credit risk

The Bank has adopted the Standardized Approach to allocate capital for counterparty credit risk. The Bank has put in place an internal counterparty limit structure which is based on internal / external ratings for different types of counterparties and in line with CBB guidelines.

3.5.7 Restructured facilities

No islamic financing contracts or facilities were restructured during the six months period ended 30 June 2017.

3 Risk Management (continued)

3.5 Credit Risk (continued)

Table – 6. Credit Risk Exposures (PD-1.3.23 (a))

The following table summarises the amount of gross funded credit exposures and average gross funded exposures allocated in own capital. The average gross funded and unfunded exposures are calculated based on month end balances.

	<i>Own capital</i>	
	<i>Total gross credit exposure</i> <i>US\$ '000</i>	<i>Average gross exposure</i> <i>US\$ '000</i>
Funded		
Cash and balances with banks	4,267	3,385
Due from banks	8,500	3,917
Mudaraba receivables	10,539	7,847
Financing receivables	6,762	7,062
Investment in sukuks	74,941	77,477
Investment in equities and funds	5,921	5,922
Investment in real estate	27,906	28,056
Equipment	142	143
Other assets	1,656	1,716
	140,634	135,525

The majority of the Bank's portfolio is collateralized by real estate properties, where the collateral is for all sukukholders and not specific to the Bank. The Bank did not maintain any unfunded exposures during the period ended 30 June 2017.

3 Risk Management (continued)

3.5 Credit Risk (continued)

Table – 7. Credit Risk – Geographic Breakdown (PD-1.3.23(b))

The following table summarises the geographic distribution of exposures, broken down into significant areas by types of credit exposure.

	<i>Own capital</i>			<i>Total</i>
	<i>*Geographic area</i>			
	<i>Bahrain</i>	<i>GCC</i>	<i>Others</i>	
	<i>US\$ '000</i>	<i>US\$ '000</i>	<i>US\$ '000</i>	<i>US\$ '000</i>
Cash and balances with banks	1,287	-	2,980	4,267
Due from banks	8,500	-	-	8,500
Mudaraba receivables	10,539	-	-	10,539
Financing receivables	3,488	3,274	-	6,762
Investment in sukuks	19,154	49,800	5,987	74,941
Investment in equities and funds	5,702	219	-	5,921
Investment in real estate	27,906	-	-	27,906
Equipment	142	-	-	142
Other assets	950	680	26	1,656
	77,668	53,973	8,993	140,634

* Geographical distribution of exposure is based on counterparty / obligor country of incorporation.

3 Risk Management (continued)

3.5 Credit Risk (continued)

Table – 8. Credit Risk – Industry Sector Breakdown (PD-1.3.23(c))

The following table summarises the distribution of credit exposures by industry, broken down into types of credit exposure:

	<i>Own capital</i>				<i>Total</i>
	<i>Industry sector</i>				
	<i>Banks and financial institutions</i>	<i>Government</i>	<i>Real estate</i>	<i>Others</i>	
	<i>US\$ '000</i>	<i>US\$ '000</i>	<i>US\$ '000</i>	<i>US\$ '000</i>	<i>US\$ '000</i>
Funded					
Cash and balances with banks	4,260	-	-	7	4,267
Due from banks	8,500	-	-	-	8,500
Mudaraba receivables	10,539	-	-	-	10,539
Financing receivables	-	-	6,762	-	6,762
Investment in sukuks	31,766	28,634	8,719	5,822	74,941
Investment in equities and funds	497	-	5,424	-	5,921
Investment in real estate	-	-	27,906	-	27,906
Equipment	-	-	-	142	142
Other assets	462	243	349	602	1,656
Total	56,024	28,877	49,160	6,573	140,634

3 Risk Management (continued)

3.5 Credit Risk (continued)

Table – 9. Credit Risk – Related party and intra-group transactions (PD-1.3.23(d))

The balances and transactions with the related parties are disclosed in note 9 of the interim condensed consolidated financial statements and all related party transactions have been made on an arm's length basis.

The balances of the Bank's transactions with its subsidiary are as follows:

	<i><u>Own capital</u></i> <i><u>US\$ '000</u></i>
Statement of financial position	
Investment in the Short Term Sukuk Centre	33,860
Agency fee receivable from the Short Term Sukuk Centre	2,052
Income receivable - STS Investment Sukuk	18
Wakala payable-STS	(8,009)
Statement of income	
Income from investment in the Short Term Sukuk Centre	131
Agency fee income	2,087
Exp.on wakala payable-STS	(15)

The Bank has policies and procedures for handling related party transactions including loans and advances to directors, senior management and their related parties, as well as transactions and agreements in which a director or an employee has a material interest. Bank's policy of related party transaction is aligned with CBB guidelines on such transactions. A process is in place by which all related party transactions will be reported to the Board on a quarterly basis.

As per the Bank's policy, the Directors concerned do not participate in decisions in which they have or may have a potential conflict of interest except for the inter-banks limits, which is reviewed on annual basis based on management valuation and recommendation, includes a number of financial institutions including shareholders and their closely related financial institutions. Management, have reviewed all such transactions during 2016, it was concluded that there were no transactions involving potential conflict of interest which need to be brought to the attention of the shareholders. Refer to note 9 of the interim condensed consolidated financial statement for the period ended 30 June 2017 for complete details. All related party transactions are reported to the Bank's Board of Directors and relevant committees.

3 Risk Management (continued)

3.5 Credit Risk (continued)

Table – 10. Credit Risk – Concentration of Risk (PD-1.3.23(f))

Below are exposures to counterparties in excess of the 15% individual obligor limit:

	<i>Own capital</i> <i>US\$ '000</i>
Counterparty 1*	19,886
Total	19,886

*The exposure is partially exempted as per CBB guidelines, as it is a money market exposure with a not connected counterparty denominated in USD with a maturity of less than 3 months.

The excess over the single obligor limit is risk weighted at 800%, in accordance with the CBB rules and regulations.

3 Risk Management (continued)

3.5 Credit Risk (continued)

Table – 11. Credit Risk – Residual Contractual Maturity Breakdown (Own Capital) (PD-1.3.23(g))

The following table summarises the residual contractual maturity of own capital breakdown of the whole credit portfolio, broken down by types of credit exposures.

	<i>Own capital</i>								<i>Total</i> US\$ '000
	<i>Maturity breakdown</i>								
	<i>Up to 1 month US\$ '000</i>	<i>1 to 3 months US\$ '000</i>	<i>3 to 6 months US\$ '000</i>	<i>6 months to 1 year US\$ '000</i>	<i>1 to 3 years US\$ '000</i>	<i>3 to 5 years US\$ '000</i>	<i>Over 5 years US\$ '000</i>	<i>No fixed maturity US\$ '000</i>	
Cash and balances with banks	4,267	-	-	-	-	-	-	-	4,267

Total	21,343	-	-	3,000	18,343	22,425	17	-	-	22,442

3 Risk Management (continued)

3.6 Market risk

Market risk is the risk that arises from fluctuations in market risk factors that include, inter alia, profit rates, currency risk and equity prices and will have a negative impact on the Bank's income and may influence the value of its portfolios.

Profit rate risk

Profit rate risk arises from a) mismatch of maturities of assets and liabilities b) Basis Value Risk and c) Profit rate curve risk. The Bank measures profit rate risk using the following methodologies:

- a) Gap analysis: where the assets and liabilities are classified into time bands based on the maturity in case of fixed rate instruments or re-pricing dates for floating rate instruments.
- b) Economic value of equity-duration gap: this measures the loss in value of the portfolio due to change in profit rates.

The Bank manages such risk by ensuring that minimum maturity mismatch is achieved between its assets and liabilities and through fixed rates on its assets and liabilities. The Treasury department monitors profit rate risk regularly and submits reports to the Asset and Liability Committee and CIC.

Profit Currency risk

Currency risk represents fluctuations in exposures held by the Group in currencies other than the US dollar. The Group may engage, in normal course of business, in transactions denominated in currencies other than its functional currency.

Equity price risk

The Bank has guidelines in place to manage equity price risk. Examples of these guidelines include:

- a) Equity investment is managed at the preacquisition stage by understanding its performance through different scenarios.
- b) Specific deal structure to maximise investment rate of return.
- c) Portfolio approach through geographical and industrial diversification.

3.6.1 Market risk strategy

The Board is responsible for approving and reviewing (at least annually), the risk strategy and significant amendments to the risk policies and procedures. The Bank's senior management is responsible for implementing the risk strategy approved by the Board, and continually enhancing the policies and procedures for identifying, measuring, monitoring and controlling risks.

In line with the Bank's risk management objectives and risk tolerance levels, strategies for market risk management include:

- 1 Managing its market risk exposure by evaluating each new product / activity with respect to the market risk introduced by it;
- 2 Proactively measuring and continually monitoring the market risk in its portfolio;
- 3 Holding sufficient capital in line with the Basel and CBB regulatory capital requirements;
- 4 Establishing a limit structure to monitor and control the market risk in its portfolio, these limits shall include position limits and maturity limits;
- 5 Matching the amount of floating rate assets with floating rate liabilities; and
- 6 Identifying the foreign currencies in which it wishes to deal in and actively manage its market risk in all foreign currencies in which it has significant exposure.

3 Risk Management (continued)

3.6 Market Risk (continued)

3.6.2 Limits monitoring

The Treasury Department and Credit and Risk Management Department ("RCD") monitor the risk limits for each transaction, ensure that the exposures are well within set parameters and report periodically to senior management.

3.6.3 Breach of limits

Adherence to internal and regulatory limits is ensured before incurring any exposure and approvals from the respective approving authority is obtained. In case limits are breached, it will be brought to the appropriate authority, as per Discretionary Authority Limit, for their action. The limits are revised at least annually or when deemed required.

Table – 13. Market risk capital requirements (PD-1.3.27 (b))

The following table summarises the capital requirement by each category of market risk;

	<i>Risk weighted assets US\$ '000</i>	<i>Capital requirement US\$ '000</i>
Maximum market risk - Foreign exchange risk	1,375	172
Minimum market risk - Foreign exchange risk	1,375	172

3.7 Operational risk

3.7.1 Introduction

Operational risk is the risk of loss arising from inadequate information systems, technology failures, breaches in internal controls, fraud, unforeseen catastrophes, or other operational problems that may result in unexpected losses or damage the Bank's reputation.

3.7.2 Sources of operational risk

The different sources of operational risks faced by the Bank can be classified broadly into the following categories:

(a) People risk which arises due to staffing inadequacy, unattractive remuneration structure, lack in staff development policies, lack in procedures for appointment, unhealthy professional working relationship and unethical environment.

(b) Processes risk which arises due to inadequate general controls, inadequate application controls, improper business and market practices and procedures, inappropriate/inadequate monitoring and reporting.

(c) Systems (Technology) risk which arise due to integrity of information - lacking in timelines of information, omission and duplication of data, hardware failures due to power surge, obsolescence and low quality programmes.

3.7.3 Operational risk management strategy

As a strategy, the Bank has identified the sources of operational risks in coordination with each business unit. The Bank completed the RCSA to identify the operational risks it is exposed to and has taken steps to monitor and minimize this risk.

3 Risk Management (continued)

3.7 Operational Risk (continued)

3.7.3 Operational risk management strategy (continued)

On a continuous basis, the Bank:

- a. assesses the effectiveness of controls associated with identified risks.
- b. regularly monitors operational risk profiles and material exposures to losses.
- c. identifies stress events and scenarios to which it is vulnerable and assess their potential impact, and the probability of aggregated losses from a single event leading to other risks.

3.7.4 Operational risk monitoring and reporting

The internal monitoring and reporting process ensures a consistent approach for providing pertinent information to senior management for the quick detection and correction of deficiencies in the policies, processes and procedures for managing operational risk through ongoing, periodic reviews.

The objective of the reporting process is to ensure relevant information is provided to senior management and the Board to enable the proactive management of operational risk. The process ensures a consistent approach for providing information that enables appropriate decision making and action taking.

During the period, the Bank had no penalties reported to the CBB.

3.7.5 Operational risk mitigation and control

The business units, in consultation with CRD will determine all material operational risks and decide the appropriate procedures to be used to control and mitigate the risks.

For those risks that cannot be controlled, the business units in conjunction with the CRD will decide whether to accept the risks, reduce the level of business activity involved, transfer the risk outside the Bank or withdraw from the associated activity completely. The CRD facilitates the business units in co-developing the mitigation plans.

3.7.6 Business continuity plan ("BCP")

The Bank has developed a comprehensive business continuity plan detailing the steps to be taken in the event of extreme conditions to resume the Bank's operations with minimum delay and disturbance. Elements of contingency plans and disaster recovery processes include operating systems, physical space, telecommunications and resources.

The CRD ensures that the BCP is kept up-to-date and is tested once a year in a simulated environment to ensure that it can be implemented in emergency situations. They also ensure that management and staff understand how it is to be executed. Results of this testing and evaluation conducted by CRD is presented to the Risk Management and Compliance Committee and Board for evaluation. The plan is reviewed periodically to assess and incorporate changes in the business and market conditions.

3.8 Equity positions in the banking book

Equity price risk is the risk of decline in the value of a security or portfolio and is the biggest risk faced by all investors. The equity price risk exposure arises from the Group's investment portfolio and can be minimised through diversification. The Group manages and monitors its equity risk using investment limits. The equity position that the Group is holding is for capital gain purposes. The Group has no holdings for any other reason except for capital gain.

The accounting policies, including valuation methodologies and their related key assumptions, are disclosed in the Group's consolidated financial statements for the year ended 31 December 2016.

Table – 14. Equity position risk in banking book (PD-1.3.31 (b) (c) and (f))

The following table summarises the amount of total and average gross exposure of equity based financing structures by types of financing contracts and investments.

	<i>Total gross e US\$ '000</i>	<i>* Average gross exposure US\$ '000</i>	<i>Publicly traded US\$ '000</i>	<i>Risk weighted assets US\$ '000</i>	<i>Capital Requirement US\$ '000</i>
Equity investments	5,921	5,922	-	11,843	1,480

*Average balances are computed based on month end balances.

Table – 15. Equity gains or losses in banking book (PD-1.3.31 (d) and (e))

	<i>US\$ '000</i>
Total unrealized gains recognized in the balance sheet but not through P&L	2,460

3.9 Liquidity risk

3.9.1 Introduction

Liquidity risk is defined as the risk that the Bank will be unable to meet its obligations as they come due because of an inability to obtain adequate funding or to liquidate assets.

3.9.2 Sources of liquidity risk

The sources of liquidity risk can broadly be categorized in the following:

- a. **Funding risk** is the risk of not being able to fund net outflows due to unanticipated withdrawal of credit lines;
- b. **Call risk** is the risk of crystallization of a contingent liability; and
- c. **Event risk** is the risk of rating downgrades or other negative public news leading to a loss of market confidence in the Bank.

3.9.3 Bank's liquidity strategy

The Board reviews the liquidity strategy on an annual basis and amends the existing strategy, as deemed required. For this purpose, all business units advise the Treasury Department of their projected liquidity requirements and contributions at the start of each year as part of annual budgeting process.

The liquidity strategy highlights any anticipated liquidity shortfalls, the Shari'a compliant funding requirements to finance these shortfalls and their impact on the balance sheet. The Bank also has a liquidity contingency plan that deals with stressed scenarios and outlines an action plan that can be taken in the event of a loss of market liquidity.

3 Risk Management (continued)

3.9 Liquidity risk (continued)

3.9.4 Liquidity risk strategy

The Bank monitors the liquidity position by comparing maturing assets and liabilities in different time buckets of up to 1 month, 1-3 months, 3-6 months, 6 months to 1 year, 1-3 years, 3-5 years, 5-10 years and no fixed maturity. The Bank carries out stress testing periodically using the worst case scenarios to assess the effects of changes in market conditions on the liquidity of the Bank.

The Bank has established a contingency liquidity plan to meet urgent liquidity requirements in stressed conditions that addresses how funding liquidity would be managed if either their specific financial conditions were to decline or broader conditions created a liquidity problem. The plan is reviewed on a regular basis and updated as required.

The Treasury Department, in conjunction with RCD periodically reviews, at least on an annual basis, the liquidity risk strategy before presenting to the RMC and subsequently the Board for approval.

The Bank uses a combination of different limits to ensure that liquidity is managed and controlled in an optimal manner. The Bank has set the following limits for monitoring liquidity risks:

- a. Liquidity gap limits; and
- b. Liquidity ratio limits.

3.9.5 Contingency Funding Plan

The Bank has developed a contingency funding plan which details procedures to be followed by the Bank, in the event of a liquidity crisis or a situation where the Bank faces stressed liquidity conditions. The contingency funding plan is an extension of day-to-day liquidity management and involves maintenance of adequate amount of liquid assets and management of access to funding resources. The CIC discuss and monitor the situation over regular time-intervals to ensure sufficient liquidity in the Bank.

The Group's funding guidelines include:

- (a) The mobilization and placements of short-term funds, Mudaraba and Murabaha transactions which is the responsibility of the Treasury Department;
- (b) Ensuring all funding objectives are aligned to the strategic objectives of the Bank;
- (c) The composition, characteristics and diversification of the Bank's funding structure are monitored by CIC and executed by the Treasury Department;
- (d) Treasury Department maintains the counterparty relationships to obtain the necessary lines of funding;
- (e) The CIC monitors the concentration of funding sources across products and counterparties and effect measures to mitigate undue concentrations; and
- (f) Treasury Department implements the deals within the approved guidelines, including the approved products and the counterparties.

Table – 16. Equity position in banking book liquidity ratios (PD-1.3.37)

The following table summarises the liquidity ratios:

	30 June	31 December			
	2017	2016	2015	2014	2013
(a) Short term assets (maturity in less than 1 year) / short term liabilities (maturity in less than 1 year)	29%	31%	35%	14%	38%
(b) Commodities Murabaha / Total Assets	-	-	-	-	4%
(c) Liquid Assets / Total Assets	17%	8%	15%	2%	7%
(d) Liquid Assets / Total Assets *	71%	60%	58%	63%	49%
(e) Due to Short Term Sukuk - investors / Total Assets	14%	15%	11%	20%	29%

* Management evidenced that certain sukuks are tradable or liquid and accordingly, this ratio is calculated after including the tradable sukuks as liquid assets.

3 Risk Management (continued)

3.10 Profit rate risk

3.10.1 Introduction

Profit rate risk is the potential impact of the mismatch between the rate of return on assets and the expected rate of funding due to the sources of finance.

3.10.2 Sources of profit rate risk

The different profit rate risks faced by the Bank can be classified broadly into the following categories:

- a. Re-pricing risk which arises from timing differences in the maturity (for fixed rate) and re-pricing risk (for floating rate) of assets, liabilities and off-balance sheet positions. As profit rates vary, these re-pricing mismatches expose the Bank's income and underlying economic value to unanticipated fluctuations.
- b. Yield curve risk which arises when unanticipated shifts of the yield curve have adverse effects on the Bank's income and/or underlying economic value.
- c. Basis risk which arises from imperfect correlation in the adjustment in the rate earned on products priced and the rate paid on different instruments with otherwise similar re-pricing characteristics. When profit rates change, these differences can give rise to unexpected changes in the cash flows and earnings spread between assets, liabilities and off-balance sheet instruments of similar maturities or re-pricing frequencies.
- d. Displaced commercial risk refers to the market pressure to pay returns that exceeds the rate that has been earned on the assets, financed by the liabilities, when the return on assets is under performing as compared with competitors rates.

3.10.3 Profit rate risk strategy

The fair value of financial assets may be affected by current market forces including profit rates. The Bank recognizes income on certain of its financial assets on a time-apportioned basis. As a strategy, the Bank:

- a. has identified the profit rate sensitive products and activities it wishes to engage in;
- b. has established a limit structure to monitor and control the profit rate risk of the Bank;
- c. measures profit rate risk through establishing maturity/re-pricing schedule that distributes profit rate sensitive assets, liabilities and off-balance sheet items in pre-defined time bands according to their maturity; and
- d. makes efforts to match the amount of floating rate assets with floating rate liabilities in the banking book.

3.10.4 Profit rate risk measurement tools

The Bank uses the following tools for profit rate risk measurement in the banking book:

- a. Re-pricing gap analysis which measures the arithmetic difference between the profit-sensitive assets and liabilities of the banking book in absolute terms; and
- b. Basis Point Value ("BPV") analysis which is the sensitivity measure for all profit rate priced products and positions. The BPV is the change in net present value of a position arising from a 1 basis point shift in the yield curve. This quantifies the sensitivity of the position or portfolio to changes in profit rates.

3.10.5 Profit rate risk monitoring and reporting

The Treasury department monitors these limits regularly. The Executive Management review the results of gap limits and exceptions, if any, and recommends corrective action to be taken according to authority parameters approved by the Risk Management Committee.

3 Risk Management (continued)

3.10 Profit rate risk (continued)

3.10.5 Profit rate risk monitoring and reporting (continued)

Table – 17. Profit rate risk in banking book (PD-1.3.40 (b))

The following table summarises the effect on the value of assets, liabilities and economic capital for a benchmark change of 200bp in profit rates:

	<i>Up to 1 month US\$ '000</i>	<i>1 to 3 months US\$ '000</i>	<i>3 to 6 months US\$ '000</i>	<i>6 months to 1 year US\$ '000</i>	<i>Over 1 years US\$ '000</i>
Due from banks	8,500	-	-	-	-
Mudaraba receivables	10,539	-	-	-	-
Financing receivables	-	600	-	675	5,487
Investment in sukuks	-	-	-	-	74,941
Profit rate sensitive assets	19,039	600	-	675	80,427
Due to short term sukuk investors and banks	85,806	-	-	-	-
Profit rate sensitive liabilities	85,806	-	-	-	-
Profit rate gap	(66,767)	600	-	675	80,427
Profit rate sensitivity (200BPS)	(1,335)	12	-	14	1,609

	<i>Effect on value of asset US\$ '000</i>	<i>Effect on value of liability US\$ '000</i>	<i>Effect on value of economic capital US\$ '000</i>
Effect of an increase of 200 basis points	2,015	1,716	299

The impact of a similar decrease in profit rate will be approximately opposite to the impact disclosed

Table – 18. Quantitative indicators of financial performance and position (PD-1.3.9 (b))

The following table summarises the basic quantitative indicators of financial performance for the past 5 years:

	<i>30 June 2017</i>	<i>2016</i>	<i>31 December</i>		<i>2013</i>
			<i>2015</i>	<i>2014</i>	
Return on average equity*	4.65%	-28.63%	5.00%	6.00%	6.00%
Return on average assets*	1.79%	-11.14%	1.85%	2.00%	1.65%
Cost to income ratio**	65.38%	403.20%	65.00%	58.00%	62.00%

*Annualized

**Cost includes operating costs plus provisions and unrealized losses on fair value through statement of income.
